

In today's world, technology covers the lives of most of us.

Because of that, phones have now become much more capable than before.

The two major **Operating Systems** (OS) for phones are

Android

Apple

You can download apps in any of them through these

Android Play Store

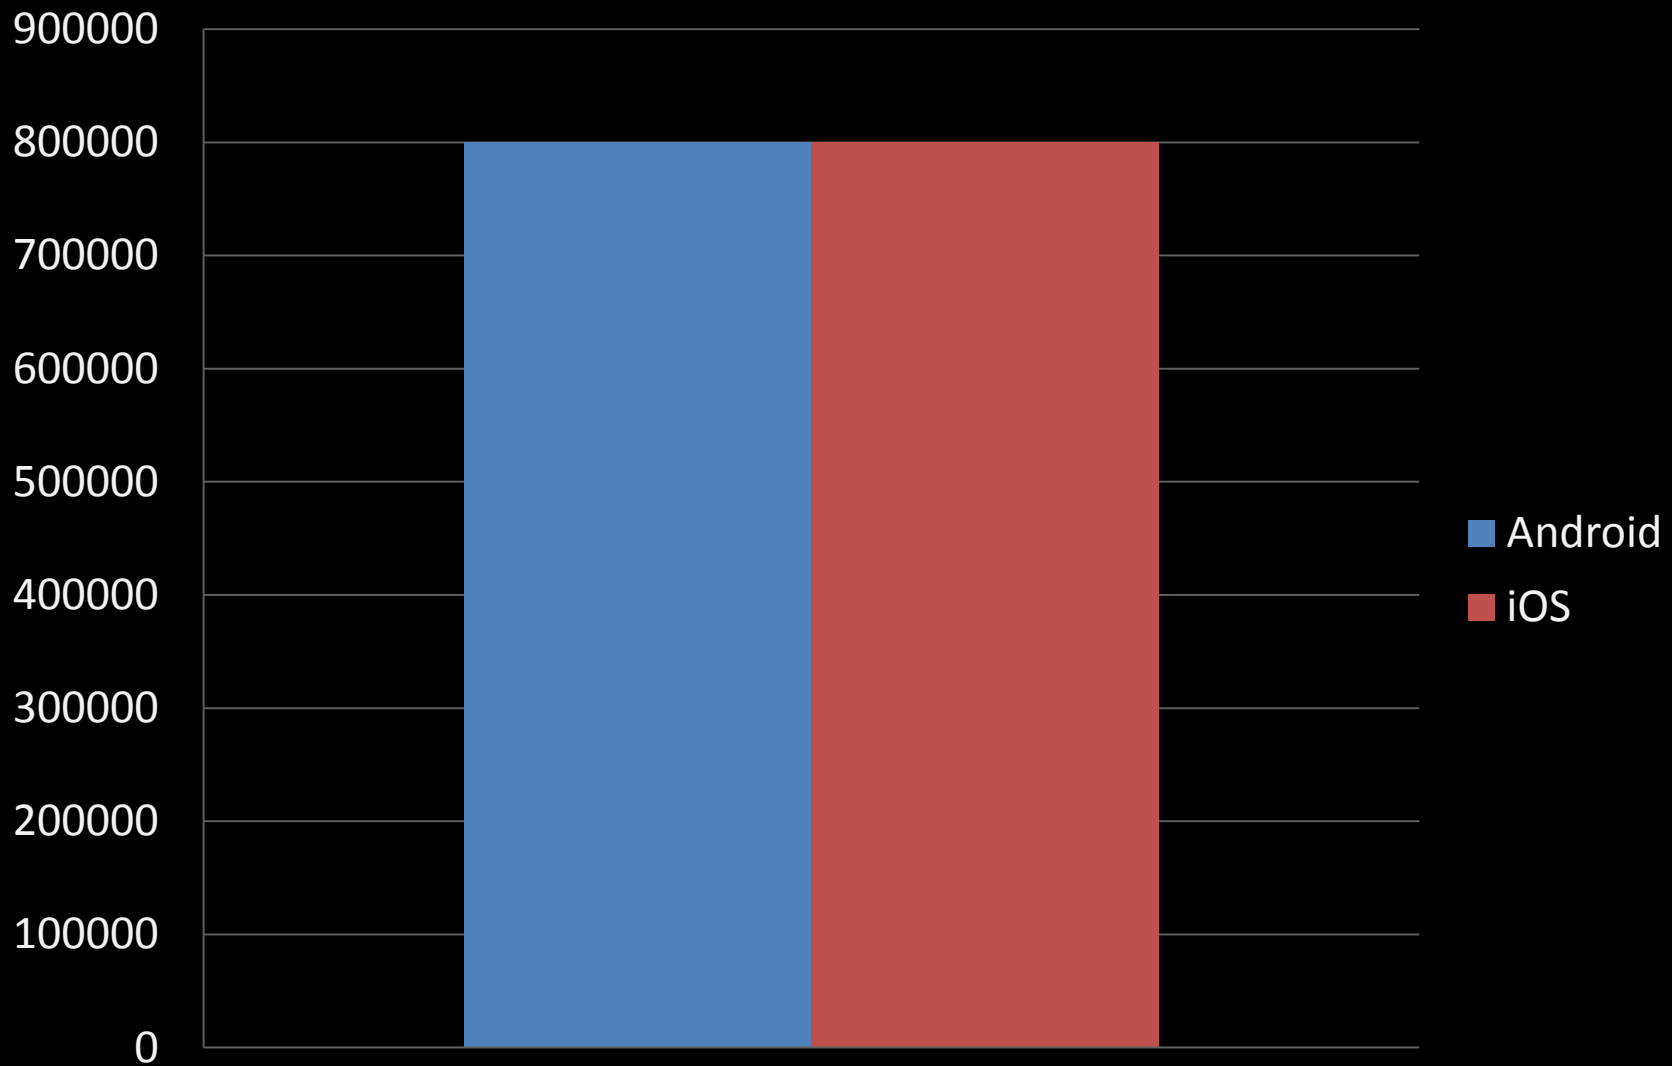

Apple App Store

# WHICH OS HAS THE MOST NUMBER OF APPS?

Android or iOS

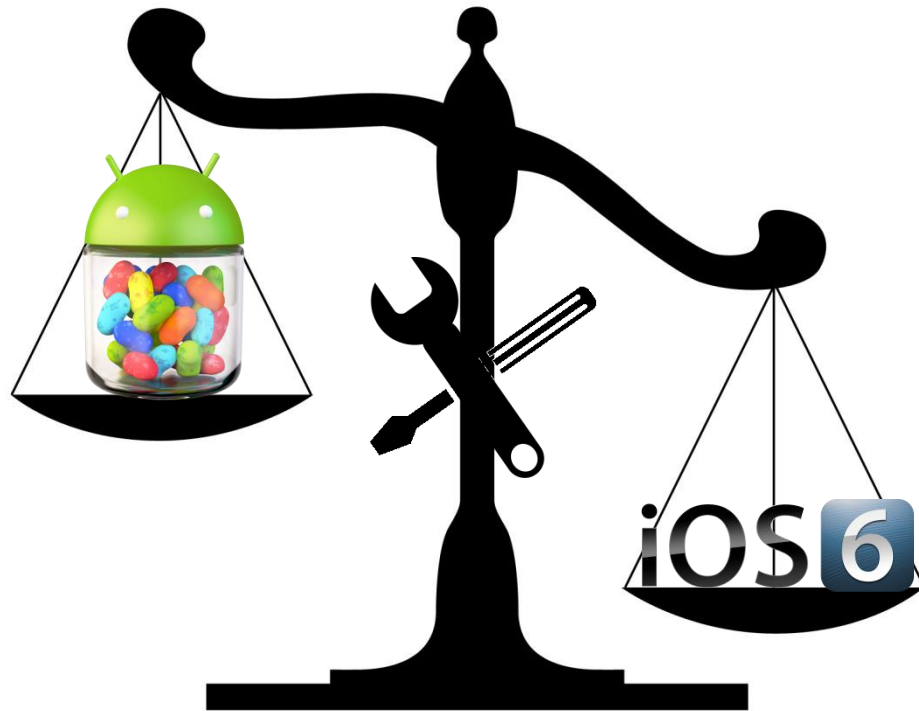

Operating Systems like BlackBerry and Windows Phone don't have many apps, thus making it a big down point.

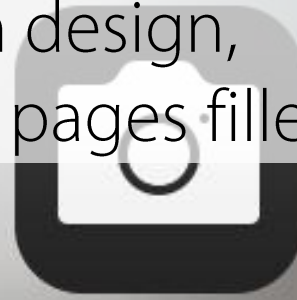

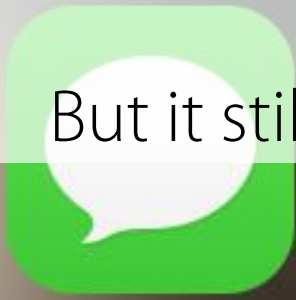

# The ideology of Open and Closed

Android is an open operating system. It can be customized much more than Apple's iOS.

iOS 7 is a **great** leap in design,  
But it still follows up the traditional pages filled by icons.

But the main advantage in iOS is the simplicity. Its much simpler to use.

It helps many people who are not tech savvy and just want to use their phone without much to think about.

# The Verdict

Apple wins.

What's your verdict? Tell us what you think.
